Discover a new world of analog instant photography with the Instant Lab

When The Impossible Project saved the world's last Polaroid film plant in 2008, they opened the door to a new era of instant analog photography. Now you can create incredibly classic instant photos from images on your iPhone with The Impossible Instant Lab.

Select a picture, place your iPhone on the Instant Lab, and within seconds it ejects your analog instant photo, ready to develop in your hand.

Prints any image from your phone

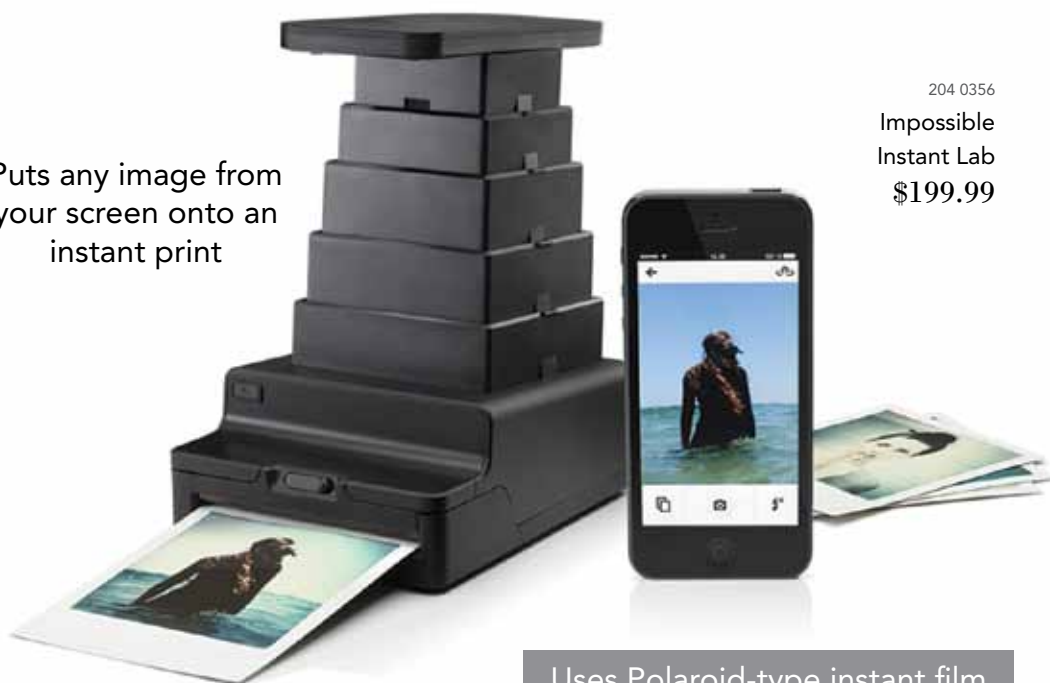

It doesn't matter whether your digital image was shot with your phone or created in Adobe Photoshop; any image on your phone's display can be turned into a real analog instant photo.

You'll never think about pictures the same way

Shift your photographic perspective with Lytro, a digital camera that records the entire light field instead of a 2D image. Since the images retain all the light data, you can change the focal point and shift the perspective of the pictures long after you've taken them! View and enhance your images on your computer, phone or tablet, then share them on the Lytro Web Gallery. The touchscreen in the back provides a wide variety of control over the exposure and optical zoom.

Olloclip brings it closer and clearer

Expand your iPhone photographic possibilities with Olloclip's 2-in-1 slide-on lens set. One side features a 2X telephoto that brings subjects closer in your view. The other side of the lens piece features a circular polarizing lens (CPL), designed to reduce glare from reflected surfaces and show colors more true to life. The CPL can also be easily removed and placed over the telephoto lens to create glare-free close up shots.

Enhance your *iPhone* photography, *Italian* style

Your iPhone is your camera. Now it's time to equip it. Add a tripod mount, kickstand, LED floodlight and a variety of lenses using the KLYP+ system from Manfrotto, the Italian firm that's been revolutionizing photography since the '60s. The center of the KLYP+ system is the KLYP+ bumper case: it's both a rugged polycarbonate/TPU case and a mounting system for accessories.

Tripods keep it steady

Perfect your photography with a compact tripod for shake-free images

Make your photos sharper and keep videos straight with a compact collapsible tripod from Manfrotto. With a built-in grip-style head that can be swapped from photo to video mode, this tripod allows you to choose which axes to lock. Designed with ergonomic lever leg locks, the tripod sets up and breaks down in seconds. A quick-release plate for your camera or phone mount makes things even faster. Precise enough for a smartphone and tough enough for entry-level DSLRs with lenses, Manfrotto's tripod lets you focus on catching the right scene at the right moment.

204 0302

Compact Series Tripod
\$59.99

Folding tripod that's ready to travel

Perfect for digital video or still cameras weighing up to four pounds, the ExplorerV tripod sets up quickly, raising to 60 inches or dropping to 22 inches with the flip of a quick release. The 3-way fluid head (2-way tilt plus pan) provides a stable platform for portrait or landscape shots, and a bubble level ensures vertical orientation. When it's time to breakdown, the ExplorerV collapses to 23 inches and includes a gear hook and a carrying handle.

204 0306

Vista ExplorerV Tripod

PHOTOGRAPHY

TIP

RULE OF THIRDS

A well established idea for painting and photography is to imagine your image divided into thirds and compose the image along those lines, rather than placing the subject right in the middle. This approach provides a way to create more mood and emphasis, based on how you compose the final shot.

GripTight Micro is ready to capture the moment

The GripTight Micro Stand is designed for most every phone and it works well as a tripod too. The legs and the grip arms fold flat so you can carry the stand in your pocket. The included GripTight mount protects your phone with firm rubber grips and holds it steady with an internal spring. It's simple but it's versatile: it even works with cases and accessories too.

Shoot video like a Hollywood feature with a Real Steadicam

The secret to those beautiful, smooth shots you see in the big budget films is the Steadicam harness that keeps the camera steady even when the camera operator is moving. The Steadicam Smoothee is based on the same Steadicam rigs used in Hollywood, but it doesn't require a harness, just a single hand.

Just slide your iPhone into the cradle and attach the ergonomic hand grip. Then start filming without shake or jostle. "Fly" wherever the scene takes you with precise, elegant control and ease.

The phone mount can be easily removed and the Steadicam Smoothee can be used with most cameras with a standard tripod mount.

Take steady videos the same way the pros do it

Works great with many cameras with a standard tripod mount

5 Steps to a Better Video

1. Don't be tempted by zoom. In general, it's better to use a dolly shot. Or make your subject come to you. Digital zoom also adds extra noise, degrading image quality.
2. Don't stare straight ahead. Your screen is a stage; make your subjects cross it. Or position them off-center for more drama. On the iPhone, turn on the "grid" feature to see the "rule of thirds" lines.
3. Avoid the shakes. If your frame is jumping all over the place, your audience will assume they're watching "found footage." Make them forget about the camera by using a Steadicam, dolly or tripod.
4. Experiment with different apps. The native iPhone app lacks a lot of features you can find on some third-party apps.
5. Use better illumination. The iPhone LED "flash" has an unflattering color temperature. Try one of the color-balanced or color-adjustable LED lamps shown in these pages to bring life to your subjects (unless you're filming zombies).

Pan & track like a pro with your own camera dolly

Take smooth tracking shots with your camera phone on any flat surface with the iStabilizer Dolly. Just clip your phone into the secure grip of the included iStabilizer mount, attach to the standard tripod threaded head and start shooting the smoothest zooming, tracking and panning shots imaginable. The flexible segmented mounting arm provides a huge range of shooting positions while the rollerblade wheels provide stable control. The wheel axles can even be turned 60 degrees and locked in place for curved paths.
